Historic Asset Allocation by Asset Class

Market Environment

2015 was marked by uncertainty caused by several globally significant economic trends: the extension of the U.S. economic cycle, the path of the Federal Reserve's monetary policy tightening, and the extent of the economic slowdown in China. This uncertainty rattled investors, culminating in risk aversion and contributing to a sharp decline in global markets, particularly during the third quarter of 2015. While the expectation is that there will be greater clarity regarding these questions over the course of 2016, we believe the American consumer can spur economic expansion domestically. With continued domestic growth, the Fed will likely remain on a cautious and gradual path to reducing monetary support, while the European Central Bank and the Bank of Japan are expected to press forward with their accommodative monetary policies. Of greatest concern are the

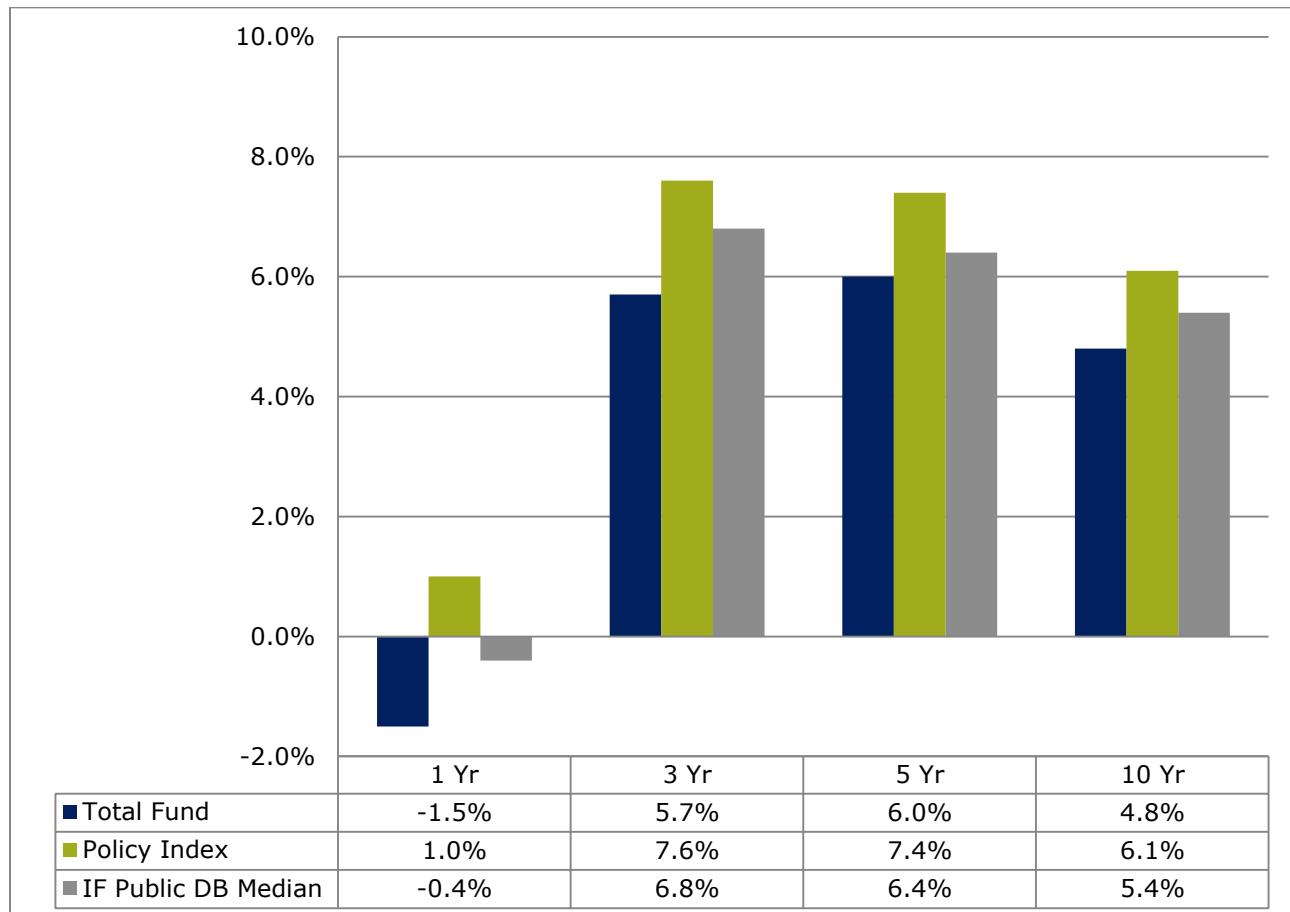

large corrections that have occurred in emerging markets in recent years amid greater dollar strength, depressed commodity prices and declining investment flows. These adjustments have been severe, but future return expectations appear to adequately compensate investors relative to the long-term risks. Nevertheless, the strength of the U.S. dollar may force a more aggressive currency adjustment in China and fuel greater volatility in emerging markets in the near term.

Total Fund Fiscal Year End Performance (Net of Fees)

For 2015, on a net of fee basis, the Total Fund returned -1.5%, which underperformed the Policy Index return of 1.0%. This ranked the Fund in the 76th percentile (1st percentile being the highest, 100th percentile being the lowest) of the InvestorForce ("IF") Public Fund DB Universe. The median (50%) return of the IF Public Fund DB Universe for this time period was -0.4%. Over the trailing three year period, the Fund's 5.7% return underperformed the Policy Index return of 7.6%. This ranked the Fund in the 75th percentile of the IF Public Fund DB Universe. The median (50%) return of the IF Public Fund for this time period was 6.8%. Over the trailing five years, the Fund's 6.0% return underperformed the Policy Index return of 7.4% and ranked the Fund in the 66th percentile. The median (50%) return of the IF Public Fund DB Universe for this time period was 6.4%.

ⁱ NEPC provides LABF with quarterly economic and investment market updates and performance reviews, investment manager monitoring and selection advice, and related investment services for traditional and non-traditional asset classes. Investment performance analysis and comparisons produced by NEPC have been calculated using standard performance evaluation methodologies and are consistent with industry standards. Performance results are calculated using a time-weighted return methodology. The Board's goal of achieving market rates of return, while mitigating unwarranted risk, is measured against appropriate benchmarks and comparative universes on a quarterly basis. Performance is measured on a most recent quarter, year-to-date, and accumulated trailing annual periods, as well as three and five year periods (full market cycle). Risk-adjusted performance on an absolute basis and a comparative basis is also measured. This review process allows the Board to evaluate and determine whether established goals and objective are being achieved. Data on traditional assets held by the Fund is provided by the Fund's custodian to NEPC. Data on alternative investments held by the Fund is provided by the investment manager to NEPC.

ⁱⁱ A fiduciary is any person who has authority or control with respect to the management or administration of plan assets.
